INFORMAČNÝ LIST PREDMETU

Vysoká škola: University of Ss. Cyril and Methodius in Trnava	
Fakulta: Faculty of Natural Sciences	
Kód predmetu: KBT/dex334/21	Názov predmetu: Active Participation in a Foreign Scientific Conference (declared by a published contribution in the proceedings)
Druh, rozsah a metóda vzdelávacích činností: Forma výučby: Odporúčaný rozsah výučby (v hodinách): Týždenný: Za obdobie štúdia: Metóda štúdia: present	
Počet kreditov: 5	
Odporúčaný semester/trimester štúdia: 2., 4., 6., 8., 10.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: Independent scientific activity under the supervision of the dissertation supervisor. The student joins the supervisor's research team in a national or international project and plans and implements initial experiments during the semester. During this part of the dissertation, the student may receive credit for learning a new experimental methodology. He/she may also receive credit for obtaining an internal grant. In collaboration with other members of the team, he/she will present preliminary results that can be used in further scientific work at a departmental seminar, at a national or international conference or in a publication in a journal registered in the Web of Science or Scopus databases without a Q1-Q4 classification in the JCF IF. Credit may also be earned in this section for citation of a scientific publication. On the basis of the achievement of publishable results, the student will receive a grade in accordance with the study regulations of the University of Ss. Cyril and Methodius in Trnava.	
Výsledky vzdelávania: <ul style="list-style-type: none"> • The student has knowledge and overview of the basic scientific methods, knows the problems and tendencies of the development of science in the field of the dissertation topic. • The student is able to define specific problems and methods of their solution and is ready to solve them. • The student acquires the competence to decide on the form and manner of presentation of the results of his/her work in the form of scientific publications. The student is able to assess the quality of his/her results and correctly identify appropriate and sufficiently high quality scientific journals for their publication. • The student will be competent to participate in a scientific team of a training or other workplace, or in a team applying the results of biotechnological research in practice, not only by manual work, but also by correct presentation of the results of experiments. 	
Stručná osnova predmetu: As part of the scientific part, the student will complete selected activities for which he/she will receive credits: <ul style="list-style-type: none"> • Publication in a Scientific Journal Registered in the Web of Science or Scopus Databases without Inclusion in Q1-Q4 in JCF IF • Publication in a Peer-Reviewed Proceedings 	

- Active Participation in a Foreign Scientific Conference (declared by a published contribution in the proceedings)
- Active Participation in a National Scientific Conference (declared by a published contribution in the proceedings)
- Member of the Research Team on a Foreign Scientific Project, Registered at UCM
- Member of the Research Team on a National Scientific Project (eg APVV, VEGA, KEGA, OPVaI), Registered at UCM
- Citation to the Publication Output Registered in the Web of Science or Scopus Databases (it must not be an autocitation, it must be an affiliation of DB FNS UCM)
- Obtaining an internal grant
- Adoption of a New Experimental Methodology I
- Adoption of a New Experimental Methodology II
- Presentation at the Seminar

Priebežné hodnotenie:

INFORMAČNÝ LIST PREDMETU

Vysoká škola: University of Ss. Cyril and Methodius in Trnava	
Fakulta: Faculty of Natural Sciences	
Kód predmetu: KBT/dex306/21	Názov predmetu: Advances in Bioanalytical Chemistry
Druh, rozsah a metóda vzdelávacích činností: Forma výučby: Lecture / Seminar Odporúčaný rozsah výučby (v hodinách): Týždenný: 2 / 2 Za obdobie štúdia: 26 / 26 Metóda štúdia: present	
Počet kreditov: 10	
Odporúčaný semester/trimester štúdia: 1., 3., 5.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: During the semester, each student will prepare and present 4 seminar reports/ppt presentations from papers recently published in international scientific journals on specific topics from the latest developments in Bioanalytical Chemistry. Each presentation is evaluated up to 20 points. The student needs to reach 60 points to get a "passed" evaluation.	
Výsledky vzdelávania: <ul style="list-style-type: none">• The student will gain knowledge of modern methods for the analysis of biochemical and biological samples in various fields of practical application, as well as advanced methods using biomolecules and biosystems as testing tools.• The student will gain knowledge of the theoretical principles of biosensors and other biochemical as well as biological methods, assays and detection systems and their applications in clinical biochemistry and medicine, food analysis, environmental monitoring, biotechnological process control and other areas.• Upon completion of the study, the student will be able to assess the applicability of individual bioanalytical methods and gain competence to work in various fields of application.	
Stručná osnova predmetu: <ol style="list-style-type: none">1. Principles of bioanalysis2. Biological sample, sample preparation before analysis3. Modern instrumental analytical methods in the analysis of biological samples4. Bioaffinity chromatography, chiral separations5. Modern methods of tissue imaging in medicine6. Use of synchrotron radiation in the analysis of biomolecules and in biomedicine7. Biochemical and biological methods of analysis (enzyme analysis, immunoassay and enzyme immunoassay)8. Use of cells and higher biological systems as probes and detection systems9. Biosensors, - principles, building components, methods of biosensor signal detection10. Enzyme biosensors, immunosensors, DNA sensors, biosensors based on biological systems (bacteria, higher cell organisms, ..)11. Nanobiosensors12. Multidisciplinary approach to biosensor development	

13. Current trends in biosensor applications in environmental analysis, in the food industry, in food quality control, in monitoring biotechnological processes, in clinical biochemistry and in medicine

Odporúčaný semester/trimester štúdia: 1., 3., 5.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: During the semester, each student will prepare and present 4 seminar reports/ppt presentations from papers recently published in international scientific journals on specific topics from the latest developments in biotechnology. Each presentation is evaluated up to 20 points. The student needs to reach 60 points to get a "passed" evaluation.	
Výsledky vzdelávania: <ul style="list-style-type: none">• To inform and gain, in particular, a comprehensive view and knowledge of the issues and opportunities of biotechnology, based on an understanding of the current potential and the latest knowledge in the individual fields and disciplines on which biotechnology is based.• The student will be able to understand biotechnology in a systematic and multidisciplinary way and to solve individual problems in the light of the latest knowledge of related disciplines.• Upon graduation, the student will have the necessary background knowledge of advances in molecular biology, medicine, pharmacy, industry, plants, the environment, and other areas of biotechnology.• The student will be able to comprehensively understand and approach problem solving and to effectively, systematically apply new knowledge gained in other specialized courses of study.• The student will acquire the competence to apply new biotechnological procedures in such focused research and practice.	
Stručná osnova predmetu: <ol style="list-style-type: none">1. Contribution of modern methods of molecular biology to the development of biotechnology2. Selected current trends in biochemistry and design methods3. Study of the structure and properties of substances and their potential for biotechnology4. Selected current trends in enzymology and their potential for the development of biotechnology5. Advances in genetic manipulation and their importance for plant, animal and medicinal biotechnology6. Applicability of bioanalytical methods / biosensors in biotechnologies (control of biotechnological processes, medical biotechnologies, environmental biotechnologies)7. Selected examples of the latest biotechnology research in the world in the fields of medical, biotechnology	

8. Selected examples of the latest biotechnology research in the world in the fields of pharmaceutical, biotechnology
9. Selected examples of the latest biotechnology research in the world in the fields of industrial biotechnology
10. Selected examples of the latest biotechnology research in the world in the fields of plant, environmental and other biotechnologies
11. Selected examples of a systems and multidisciplinary approach in biotechnology research
12. Defense of semester projects during the semester on topics related to biotechnology

Priebežné hodnotenie:

During the semester, each student will prepare and present 4 seminar reports/ppt presentations from papers recently published in international scientific journals on specific topics from the latest developments in biotechnology. Each presentation is evaluated up to 20 points. The student needs to reach 60 points to get a "passed" evaluation.

Záverečné hodnotenie:

INFORMAČNÝ LIST PREDMETU

Vysoká škola: University of Ss. Cyril and Methodius in Trnava	
Fakulta: Faculty of Natural Sciences	
Kód predmetu: KBT/dex305/21	Názov predmetu: Agricultural Biotechnology for PhD Students
Druh, rozsah a metóda vzdelávacích činností: Forma výučby: Lecture / Seminar Odporúčaný rozsah výučby (v hodinách): Týždenný: 2 / 2 Za obdobie štúdia: 26 / 26 Metóda štúdia: present	
Počet kreditov: 10	
Odporúčaný semester/trimester štúdia: 2., 4., 6.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: Active participation in lectures and successful completion of the oral exam. Before the end of the semester, the student will present in the form of a review on a selected topic in the field of the latest knowledge and applications of agricultural biotechnology. The presentation will be a condition for successful completion of the course and will form half of the final evaluation of the course. The second half of the evaluation will be an oral exam.	
Výsledky vzdelávania: By completing the subject, the student will gain <ul style="list-style-type: none">• knowledge and insight into the importance and applications of agricultural biotechnology applied to soil, plants and livestock,• knowledge and insight into the range of possible applications of biotechnology in living organisms that form the basis of agricultural production (microorganisms, plants, animals), in particular the methods and importance of improving economic parameters and properties of plants and animals used in agriculture for the production of food and feed, but also for the production of non-food outputs from agriculture (raw materials for industry, products for pharmacy and medicine, renewable energy sources, environmental benefits). The student will <ul style="list-style-type: none">• acquire the prerequisites for practical skills and the ability to work in the laboratory and in practice in general, working with the components of biotechnology (substrates, organisms, technologies) and in particular in agricultural biotechnology,• acquire basic competences for the application of theoretical knowledge in practical activities in his/her further scientific career (in biotechnology, biology) or for solving various problems in practice (agricultural and food biotechnology, use of the final production of agricultural biotechnology),• be able to design and implement biotechnological experiments and put them into practice,• be able to communicate with the professional public and to express himself/herself on the theoretical and practical aspects of agricultural biotechnology.	
Stručná osnova predmetu: <ol style="list-style-type: none">1. Genetic variability of agriculturally used plants and animals and the potential to exploit the genetic variability of other organisms.2. Methods of improvement (breeding) of plants and animals used in agriculture.	

3. Principles and use of genome and gene mapping.
4. Use of genetic maps in molecular breeding.
5. Selection by molecular markers (MAS).
6. Methods of modifying plant and animal genomes by foreign DNA transfer.
7. Importance and practical use of genetically modified plants and animals in improving their economic parameters and properties.
8. Genetically modified plants and animals with lower negative impacts on the environment.
9. Genetically modified plants and animals used as "cell factories" for the production of biologically active substances.
10. Genetically modified plants intended for the production of renewable, energetically used biomass.
11. Agricultural plants producing values in in vitro culture systems.
12. Rules for the use of genetically modified plants and animals, foods containing genetically modified organisms, social and religious aspects of their perception.

The degree of relevance, timeliness of the presented results and the ability to draw a personal opinion and conclusions on the studied issues will be evaluated.	
Výsledky vzdelávania: By completing the course, the student will gain experience and competence to design experimental work, classify and summarize the knowledge of biotechnological research in the field of recombinant DNA and genetic transformation. Within the European Qualifications Framework, students acquire the following skills and abilities by completing the course: <ul style="list-style-type: none"> • follow instructions and plan their own procedure in experimental work, namely - basic laboratory skills for working in a biotechnology laboratory, working with DNA, RNA, protein, recombinant molecules, enzymes • students gain the ability to analyze data and present this data as a basis for important decisions in their further experimental practice • the graduate is able to routinely use laboratory tools and correctly masters the principles of laboratory practice • can use information databases and work with them within the relevant tasks • knows how to design and carry out an experiment • can correctly evaluate the achieved results and discuss them with relevant practice, resp. scientific databases • can draw conclusions and correct procedures with respect to the assigned topic • the graduate is competitive within peers with respect to the international space • the graduate is ready to participate in the work process in the field of molecular - biological research at a professional level. 	
Stručná osnova predmetu: 1. The course will acquaint students with the strategy, design and preparation of genetically modified organisms.	

<p>2.Students will be introduced to working with Genbank and Uniprot databases, as a basic step for the selection and isolation of suitable genes,</p> <p>3.Choice of the necessary gene modification</p> <p>4. Selection of a suitable transformation vector according to the type of host organism</p> <p>5. Gene cloning, selection of a suitable recipient organism</p> <p>6.Selection of transformants</p> <p>7. Proof of transgenes at the genomic, transcriptomic, proteomic and metabolomic levels</p> <p>8. Methods of heterologous expression</p> <p>9.Preparation of a transgenic plant and a strategy for selecting a suitable transgene and recipient plant</p> <p>10. Used methods of transgenesis in monocotyledonous and dicotyledonous plants</p> <p>11. Examples of transgenic plants as producers of secondary metabolites</p> <p>12. Real use of transgenic organisms in practice</p> <p>13. Brief insight into legislation relevant to genetic modification</p>
<p>Priebežné hodnotenie: Completion of the course is conditioned by the elaboration of a current clear presentation on the assigned topic relevant to the content of the course and also the topic of the student's dissertation. The degree of relevance, timeliness of the presented results and the ability to draw a personal opinion and conclusions on the studied issues will be evaluated.</p>
<p>Záverečné hodnotenie: Completion of the course is conditioned by the elaboration of a current clear presentation on the assigned topic relevant to the content of the course and also the topic of the student's dissertation. The degree of relevance, timeliness of the presented results and the ability to draw a personal opinion and conclusions on the studied issues will be evaluated.</p>

During this part of the dissertation, the student may receive credit for learning a new experimental methodology. He/she may also receive credit for obtaining an internal grant. In collaboration with other members of the team, he/she will present preliminary results that can be used in further scientific work at a departmental seminar, at a national or international conference or in a publication in a journal registered in the Web of Science or Scopus databases without a Q1-Q4 classification in the JCF IF. Credit may also be earned in this section for citation of a scientific publication. On the basis of the achievement of publishable results, the student will receive a grade in accordance with the study regulations of the University of Ss. Cyril and Methodius in Trnava.

Záverečné hodnotenie:

Independent scientific activity under the supervision of the dissertation supervisor. The student joins the supervisor's research team in a national or international project and plans and implements initial experiments during the semester. During this part of the dissertation, the student may receive credit for learning a new experimental methodology. He/she may also receive credit for obtaining an internal grant. In collaboration with other members of the team, he/she will present preliminary results that can be used in further scientific work at a departmental seminar, at a national or international conference or in a publication in a journal registered in the Web of Science or Scopus databases without a Q1-Q4 classification in the JCF IF. Vysoká škola: University of Ss. Cyril and Methodius in Trnava	
Fakulta: Faculty of Natural Sciences	
Kód predmetu: KBT/dex309/21	Názov predmetu: Modern Methods for Studying the Structure, Properties and Activity of Compounds and Biomolecules
Druh, rozsah a metóda vzdelávacích činností: Forma výučby: Lecture / Seminar Odporúčaný rozsah výučby (v hodinách): Týždenný: 2 / 2 Za obdobie štúdia: 26 / 26 Metóda štúdia: present	
Počet kreditov: 10	
Odporúčaný semester/trimester štúdia: 2., 4., 6.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: During the semester, the student prepares and presents in the form of ppt three semester works, based on the chosen topic and the latest scientific knowledge from the scientific literature. For each work, the student can get 4-10 points and the work will be evaluated in terms of form and content of the text, presentation and discussion. The condition for the final exam is to obtain at least 20 points. The final exam will take the form of an oral examination testing the knowledge related to the individual areas of the syllabus.	
Výsledky vzdelávania: <ul style="list-style-type: none">• The student will gain knowledge about the study of the properties and activities of biological molecules and their application in various biotechnological industries based on the latest knowledge from the world literature and practical applications.• The student will acquire the ability to perceive biotechnology in a systemic and multidisciplinary way and to solve sub-problems related to the use of active substances and biomolecules.• The student will acquire the ability to creatively and comprehensively perceive, present and discuss the assigned problem by developing his/her own term paper and its presentation.• By completing the course, the student will gain basic information and knowledge of advances in various areas of biological, biochemical, physiological and biotechnological research on biomolecules.• The student will acquire the competence to comprehensively understand and, in particular, to approach the solution of a given problem and to effectively and systematically use new knowledge in the theoretical and applied field, i.e. in scientific research, development, as well as in practice.	
Stručná osnova predmetu: <ol style="list-style-type: none">1. Definition of biologically active molecules, importance, classification. Occurrence, sources.2. Metabolic processes of living organisms – microorganisms, fungi, plants, animals.3. History of development of methods for studying the properties and activities of biomolecules.4. Carbohydrates - definition, classification, structure and properties, reactions, biosynthesis, natural products.5. Amino acids, peptides, proteins - classification, synthesis and its methods, biosynthesis, chemical reactions, structure, denaturation of proteins.	

6. Enzymes - nomenclature and classification, factors influencing enzyme activity, coenzymes, inhibitors, purification, mechanism of catalysis.
7. Fermentation - types, importance and practical uses. Biocatalysis - importance in Green Chemistry.
8. Pyrimidines, purines, nucleic acids - structure of nucleic acid components, forms of DNA, types of RNA and their structure, genetic code, gene therapy.
9. Lipid substances and fats - classification, biological functions, extraction, refining, identification, aromatization, liposomes.
10. Terpenoids - essential oils, classification, identification, isolation, application.
11. Alkaloids - occurrence, sources, extraction from plant sources, properties, methylation, modification, medical importance.
12. Inovative trends in the study, properties and activities of compounds and biomolecules - molecular gastronomy, pharmaceutical biotechnology, genetic therapy, forensic medicine and others.

Vysoká škola: University of Ss. Cyril and Methodius in Trnava	
Fakulta: Faculty of Natural Sciences	
Kód predmetu: KOJP/dex301/21	Názov predmetu: Professional English for PhD Students
Druh, rozsah a metóda vzdelávacích činností: Forma výučby: Lecture / Seminar Odporúčaný rozsah výučby (v hodinách): Týždenný: 2 / 2 Za obdobie štúdia: 26 / 26 Metóda štúdia: present	
Počet kreditov: 10	
Odporúčaný semester/trimester štúdia: 1., 3., 5.	
Stupeň štúdia: III.	
Podmieňujúce predmety:	
Podmienky na absolvovanie predmetu: Conditions for completing the subject: Students are evaluated on the basis of the portfolio they create from the outputs during the semester, and defend at the final colloquium. They develop, submit and defend: - Extended abstract for a scientific conference at the proceedings of abstracts. - Research paper from the field of studies usually related to the topic of the dissertation project in the IMRAD international standard structure within the range of three to five pages. (It can be an already published article in co-authorship, partial information about the research in the diploma thesis given in the form of a scientific article, an extended article from the student research conference, etc.). - Scientific poster in PDF format. It can be thematically identical to the scientific paper. - Multimedia PowerPoint presentation or video-presentation (according to the methodological topic) in the range of 8-10 minutes (it can also be thematically identical to the paper and the poster). In the case of contact teaching, an oral presentation with PowerPoint support. - Academic curriculum vitae in Europass and alternative format, and cover letter such as a simulated internship (grant, job, etc.) application. Written outputs make a part of the final evaluation in the range - 60%, Oral presentation of a scientific topic with PowerPoint support - 40%.	
Výsledky vzdelávania: Educational outcomes: Upon successful completion of this course, students gain: Knowledge: - can define and distinguish genres of scientific communication (research paper, poster, presentation, research report, etc.), - knows grammatical, syntactic, phraseological peculiarities of genres, lexicon of the scientific-research environment, - know general and professional vocabulary, synonyms, homonyms, antonyms, neologisms, internationalisms, multiword terms, composites, etc., which they use in making own speeches, - know the morphematic structure of the word and the principles of word formation in English and can apply them when translating from and into English, - knows and are able to apply academic discourse and the specifics of academic English. Skills:	

can handle different types of multilingual dictionaries and professional glossaries,
acquire specific language means and speech skills necessary for the development of advanced communication competences and cultural and social habits in the preparation for an international scientific event,
are able to work with professional literature sources, manage work with digital media and can select relevant information sources,
have skills in creating effective PowerPoint slides to support the presentation of research results, can and graphically and grammatically correctly develop a scientific poster, use several software applications for its creation,
can interpret graphs, diagrams, schemes, tables, pictograms and symbols, and apply them in scientific texts,
practically elaborate an academic CV and cover letter.

Professional competencies:

can flexibly apply the acquired language and communication skills and competencies in the target professional environment,
can effectively use specialized monolingual and bilingual dictionaries in practice,
can work with authentic English professional text,
master the language portfolio of phraseologisms for communication in the target professional environment.

Transferable competencies:

know the specifics of the multicultural international academic environment and intercultural differences,
acquire strong communication competencies for the international academic and scientific environment,
are able to present the results of research work at home and abroad.
can work with information and communication technologies, apply software solutions for the creation of academic texts and outputs,
handle verbal and nonverbal academic discourse.

Stručná osnova predmetu:

Brief content of the subject:

Lectures:

1. Introduction to the subject. Instruction on access to databases and study literature. Characteristics of the scientific field and study discipline, glossary of academic terms. English - the language of science.
2. Working with professional English text, reading comprehension, horizontal and vertical division of the text (skimming, scanning, reading for information), making notes from the heard content.
3. Work with professional English text, translation strategies. Characteristics of the monolingual and bilingual printed, electronic and online dictionaries. Principles of work with and effective use of dictionaries.
4. Academic writing. Abstract, types of abstracts, principles of abstract writing.
5. Academic writing. Research paper, structure of a research paper according to international standards (IMRAD).
6. Academic writing. Stylistic and morphological-syntactic characteristics of research paper writing (title, keywords, abstract, introduction, material and methods, discussion, conclusion). Citation standards.
7. Scientific poster and poster presentation. Principles of design, the most common styles and structure of a scientific poster.

8. Presentation - principles of effective scientific presentation. Structure and language of the presentation. Communication models, verbal and nonverbal communication, interaction with the audience.

9. Presentation - principles of creating effective PowerPoint slides. Technical, graphic, language and content principles of creating PPT images.

10. Graphical expression of research data - graphs, diagrams, schemes, tables. Reading information from graphs and tables. Their inclusion in the text of a scientific article and in a poster.

11. Academic CV and cover letter. Characteristics of genres and their specifics in the academic environment.

12. Written and oral communication in the academic environment. Communication via electronic media (e-mail, internet). Language specifics of writing an e-mail message. Email label. Communication in a multicultural academic environment, intercultural differences. Conference environment and conference etiquette.

Seminars:

1. Panel discussion and assignment of parameters to written and oral presentations (abstract, research paper and scientific poster, CV and cover letter, professional presentation with the support of PPT). Specifics of English academic terminology, differences between Slovak and English, academic degrees in English.

2. Practical application of reading comprehension skills and recording spoken / listened information.

3. Practical examples in the translation of a selected professional text. The most common mistakes when translating from and into English. Short text translation and translation analysis - group work.

4. Work with authentic materials from the academic and scientific environment (scientific proceedings, scientific journals), study and comparison of compliance with international standards. Practical exercises on the topic.

5. Practical demonstrations and exercises: Title writing, choice of keywords, the difference between abstract, introduction and summary. Writing active and passive sentence constructions. Analysis of linguistic errors in sentences in individual parts of a scientific article.

6. Demonstrations and work with software applications in designing a scientific poster, graphic design, work with templates. Stylistic and linguistic differences between the poster text and the research paper.

7. Panel discussion about presentations, practical language exercises for the development of the language of presentation (signposting language).

8. Practical application of theoretical principles in the creation of effective PPT images in the presentation of the research report.

9. Verbal interpretation of graphs - expressing development, trends, changes and proportions. Practical application of professional lexicon.

10. Online academic CV writing in Europass CV format.

11. Practical experience from the use of electronic communication media in academic communication. Samples of correct and incorrect communication etiquette. Discussion of multiculturalism and intercultural differences in the academic and conference environment.

12. Final colloquium, defense and evaluation of student portfolio.

Priebežné hodnotenie:

Conditions for completing the subject:

Students are evaluated on the basis of the portfolio they create from the outputs during the semester, and defend at the final colloquium. They develop, submit and defend:

Extended abstract for a scientific conference at the proceedings of abstracts.

Research paper from the field of studies usually related to the topic of the dissertation project in the IMRAD international standard structure within the range of three to five pages. (It can be an

already published article in co-authorship, partial information about the research in the diploma thesis given in the form of a scientific article, an extended article from the student research conference, etc.).

Scientific poster in PDF format. It can be thematically identical to the scientific paper.

Multimedia PowerPoint presentation or video-presentation (according to the methodological topic) in the range of 8-10 minutes (it can also be thematically identical to the paper and the poster). In the case of contact teaching, an oral presentation with PowerPoint support.

Academic curriculum vitae in Europass and alternative format, and cover letter such as a simulated internship (grant, job, etc.) application.

Written outputs make a part of the final evaluation in the range - 60%, Oral presentation of a scientific topic with PowerPoint support - 40%.

The student joins the supervisor's research team in a national or international project and plans and implements initial experiments during the semester. During this part of the dissertation, the student may receive credit for learning a new experimental methodology. He/she may also receive credit for obtaining an internal grant. In collaboration with other members of the team, he/she will present preliminary results that can be used in further scientific work at a departmental seminar, at a national or international conference or in a publication in a journal registered in the Web of Science or Scopus databases without a Q1-Q4 classification in the JCF IF. Credit may also be earned in this section for citation of a scientific publication. On the basis of the achievement of publishable results, the student will receive	
Výsledky vzdelávania: <ul style="list-style-type: none"> • The student has knowledge and overview of the basic scientific methods, knows the problems and tendencies of the development of science in the field of the dissertation topic. • The student is able to define specific problems and methods of their solution and is ready to solve them. • The student acquires the competence to decide on the form and manner of presentation of the results of his/her work in the form of scientific publications. The student is able to assess the quality of his/her results and correctly identify appropriate and sufficiently high quality scientific journals for their publication. • The student will be competent to participate in a scientific team of a training or other workplace, or in a team applying the results of biotechnological research in practice, not only by manual work, but also by correct presentation of the results of experiments. 	
Stručná osnova predmetu: As part of the scientific part, the student will complete selected activities for which he/she will receive credits: <ul style="list-style-type: none"> • Publication in a Scientific Journal Registered in the Web of Science or Scopus Databases without Inclusion in Q1-Q4 in JCF IF • Publication in a Peer-Reviewed Proceedings 	

- Active Participation in a Foreign Scientific Conference (declared by a published contribution in the proceedings)
- Active Participation in a National Scientific Conference (declared by a published contribution in the proceedings)
- Member of the Research Team on a Foreign Scientific Project, Registered at UCM
- Member of the Research Team on a National Scientific Project (eg APVV, VEGA, KEGA, OPVaI), Registered at UCM
- Citation to the Publication Output Registered in the Web of Science or Scopus Databases (it must not be an autocitation, it must be an affiliation of DB FNS UCM)
- Obtaining an internal grant
- Adoption of a New Experimental Methodology I
- Adoption of a New Experimental Methodology II
- Presentation at the Seminar

Priebežné hodnotenie:

Independent scientific activity under the supervision of the dissertation supervisor. The student joins the supervisor's research team in a national or international project and plans and implements initial experiments during the semester. During this part of the dissertation, the student may receive credit for learning a new experimental methodology. He/she may also receive credit for obtaining an internal grant. In collaboration with other members of the team, he/she will present preliminary results that can be used in further scientific work at a departmental seminar, at a national or international conference or in a publication in a journal registered in the Web of Science or Scopus databases without a Q1-Q4 classification in the JCF IF. Credit may also be earned in this section for citation of a scientific publication. On the basis of the achievement of publishable results, the student will receive
